“Colour deviations and paint imperfections due to inadequate shop lighting can result in costly re-painting in the extremely demanding painting and workshop environment.”

“Colad Check Light is an easy-to-use hand-held work light that increases the work quality and saves time!”

The Colad Check Light guarantees a clear and natural view on any job, wherever you are. With an ultra-high CRI value, the special LED is designed to perform an accurate colour check on a spray sample and avoids costly re-painting in the event of colour mismatches caused by inadequate shop lighting. It allows you to detect the smallest defects, bumps and scratches in no time and its lightweight nature and ergonomic grip make the Colad Check Light easy to use.

The flexible lamp tilts up to 180 degrees and can be placed anywhere with the rotatable, robust hook or the strong built-in magnet. It can easily be placed in a pocket or attached to the work belt using the built-in belt clip.

The two power modes provide excellent, long-lasting power ensuring safety in all conditions. An automatic power saving mode avoids the risk of overheating. The operating time of 3 hours enables you to complete jobs with no interruptions for laborious recharging while the removable lens can be easily cleaned.

The Check Light excels in extremely demanding paint workshop environments thanks to its robust, dustproof and splashproof construction.
